Prime Scholars, where it actually stands

A feature-by-feature audit of the live app (build v354, 9 November 2026) against uLesson, TestDriller CBT, Myschool, Passnownow and a plain AI chat. Scores are my own weighted rubric, not market share.

85 / 100 — first on the rubric, fourth in the market.

Nobody else on this list combines a 42,000-question explained bank, real 200-level university depth, semester gating, offline packs, an AI help desk and a price a Nigerian student can pay. What holds the business back is not the product. It is that almost nobody knows it exists, and the one place it visibly loses is owned video.

1. The scorecard

Dimension	Weight	Prime Scholars	uLesson	TestDriller	Myschool	Passnownow
Question coverage & depth	18%	**96**	**80**	**82**	**72**	**55**
Explanations for every answer	12%	**98**	**85**	**72**	**45**	**35**
Exam fidelity (CBT realism)	10%	**88**	**82**	**95**	**55**	**45**
University and 200L depth	8%	**95**	**25**	**0**	**30**	**10**
Video lessons	10%	**55**	**95**	**10**	**5**	**40**
User experience	10%	**88**	**88**	**72**	**55**	**50**
Engineering reliability	8%	**92**	**86**	**70**	**60**	**55**
Price value for a student	10%	**94**	**40**	**88**	**80**	**90**
Trust and brand	8%	**45**	**95**	**92**	**95**	**40**
Retention and extras	6%	**80**	**80**	**55**	**45**	**35**
Weighted total	**100%**	**85**	**76**	**66**	**55**	**47**

Bold column is the app as it runs tonight. Competitor figures are my scores from the full audit of 7 November, carried forward unchanged; I could not re-check them live tonight.

2. Feature by feature

Feature	Prime Scholars	uLesson	TestDriller	Myschool	Passnownow
Exam-standard question bank (secondary)	Yes, 42,000 across 14 subjects	Yes	Yes, past questions	Yes	Part
Explanations on every question	Yes, all of them	Yes	Part	Part	Part
200-level university banks	Yes, 204 of 408 codes live	No	No	Part	No
Lesson videos per topic	Yes, 3,171 of 3,186 topics (YouTube)	Yes, owned	No	No	Part
CBT mock with timer	Yes	Yes	Yes, strongest	Part	No
Offline study	Yes, offline pack	Yes	Yes, strongest	No	No
Native Android / iOS app	No, installable PWA	Yes	Yes	No	No
Push notifications	No	Yes	Part	No	No
Free tier	15 questions a day, per exam	Limited	Generous samples	Free browsing	Cheap access
Price a student can pay	Yes, 2,000 a semester	No, 10,000+ a term	Yes, one-off	Part	Yes
Frictionless payment	Part, manual txn check	Yes	Part	Part	Part
In-app AI help desk	Yes, only one here	No	No	No	No
Streaks, accuracy, progress	Yes	Yes, plus parent reports	Part	No	No
School / teacher dashboards	Yes, basic	Yes, strong	Part	No	No
Referral / partner codes	Yes	No	No	Part	No
Feature-phone SMS engine	Yes, built and demoed	No	No	No	No
Past-paper authenticity	Part, exam-standard not verbatim	Part	Yes, 20+ years	Yes	Part
Video explanation per question	No	Part	No	No	No
Human tutors / live classes	No	Yes	No	No	No
Brand trust and awareness	Low	Very high	Very high	Very high	Low
Speed and reliability	Yes, edge-served	Yes	Part	Slow	Part
Semester-gated access	Yes, pay per semester	No	No	No	No

3. Where the app wins, loses and draws

Wins. Explanations on every single question is the real moat: TestDriller gives answers, not working, and Myschool gives notes. University depth is unmatched by anyone affordable. Semester gating, the SMS engine for button phones, and an AI desk that knows the bank have no competitor equivalent. Price at 2,000 naira a semester undercuts uLesson by roughly five times.

Loses. Owned video, by a wide margin, and brand. uLesson scores 95 on both. No native app means no push notifications, and a student who forgets the app is a student who stops paying. Payment is manual, which costs conversions every single day. There is no live or human tutor layer.

Draws. CBT realism and offline use are close enough to TestDriller that nobody switches for those alone; the win there is coverage, not fidelity.

4. The seven moves, in order of leverage

#	Move	Why it matters	Effort
1	Own the video, at least the top lessons	Ten percent of the biggest gap. Self-host lean files on /media so telco zero-rating [illegible]	Months, but start with one subject
2	Automatic payment verification	A student who pays and waits an hour is a student who tells friends it is slow. Webhook verification removes	Days
3	Native Android shell on Play Store	Fixes trust and push together. A bare WebView wrapper with notifications is enough; it must not be a rewrite	Weeks
4	A past-question mode, labelled honestly	Closes TestDriller's loudest claim without pretending: tag items sourced from [illegible]	Weeks
5	Sell to schools, not only students	Your dashboards already exist. uLesson charges schools heavily; a cheaper, [illegible]	Weeks to first sale
6	Use the WhatsApp channel as retention	Cheapest re-engagement you own: a daily question, a streak nudge, a results [illegible]	Days
7	Short video working for the 200 hardest questions	The one feature that makes the explanations moat visible instead of felt. Tempting, but [illegible]	Ongoing

5. How to read this

The scores are judgement, not measurement. I inspected every screen and capability of the build that is live tonight, list by list, and scored it against the same ten dimensions I scored the competitors on. The competitor column is knowledge, not a fresh scrape: internet research is unavailable in this session, so treat their numbers as my standing read rather than prices and features checked this week. Nothing here says the app is worse than its rivals. It says the product is ahead of the market's awareness of it, and that the fastest way to close the gap is distribution and payment, not more questions.
